Education

Master of Science in Computer Science New Mexico State University – 3.97 GPA	Jan 2025 – Dec 2025
Bachelor of Science in Computer Science New Mexico State University – 3.86 GPA	Jan 2022 – Dec 2024
Associate of Science Doña Ana Community College – 3.9 GPA	Jan 2020 – Jan 2022

Employment History

New Mexico State University <i>Research Assistant – Cybersecurity & Social Media Data Analysis</i>	Las Cruces, NM Jun 2025 – Sep 2025
- Built labeled datasets by collecting, reviewing, and classifying phishing and scam content from short-form video platforms. - Performed data analysis in Python on cleaned datasets to identify recurring scam strategies and engagement patterns. - Documented research findings and supported broader analysis of digital risks.	
New Mexico State University <i>Research Assistant – NAMAC Trustworthiness Knowledge Graph</i>	Las Cruces, NM Jan 2025 – May 2025
- Developed and tested a Python-based RAG knowledge retrieval pipeline integrating technical documents, LLMs, and a Neo4j knowledge graph. - Diagnosed inconsistent embedding outputs by isolating the issue and identifying incorrect documented syntax. - Mentored an undergraduate student in literature review, Neo4j, and knowledge graph construction.	
Cajun Crab <i>Cashier</i>	Las Cruces, NM Jun 2023 – June 2024
Provided customer service and coordinated daily tasks in a fast-paced environment, prioritizing work and resolving customer and operational issues.	

Technical Skills

Programming Languages: Python, HTML/CSS, SQL/MySQL, Java, C, C++, JavaScript

Tools/Software: Linux, GitHub, Amazon Web Services (AWS), Pandas, NumPy, Neo4j, RAG, LLMs, Claude Code, ChatGPT

Languages: English, Mandarin

Projects

Rust and Rescue - Software/Hardware Integration Project	Godot, GDScript, Arduino
- Designed and developed an Android mobile game in Godot that used wildlife rescue missions to raise awareness of endangered species in the American Southwest. - Implemented core gameplay mechanics in GDScript, including GPS-based movement, player-world interactions, and rescue event triggers. - Integrated an Arduino-based pressure sensor and plushy as a custom physical input device, simulating real rescue tools to enhance immersion. - Debugged and refined interactions between gameplay logic, GPS-based movement, and Arduino hardware during development.	
Bartender - Cocktail Recipe Web Application	React, JavaScript, Axios, Tailwind
- Developed a web application that allows users to search cocktail recipes by name, flavor, and ingredients. - Integrated an external API using Axios and asynchronous requests to retrieve and display recipe data.	
Othello – Web-Based Strategy Game	JavaScript, HTML, CSS
Built a browser-based Othello game in JavaScript with move validation, piece flipping, scoring, turn management, and win/tie detection.	

Extracurricular Activities

Founder & Secretary, International Collaborative Coding Club (ICCC), NMSU — Founded a student organization focused on collaborative software projects, peer learning, and cross-cultural teamwork.
